

The SiloFloat® is a smart and durable anti-algae floating cover that almost completely covers the water silo. This system can be quickly and easily installed with limited manpower – even without specific tools or electricity. All this makes the SiloFloat® ideal for export.

Algae growth and other contaminations barely have a chance with the SiloFloat®. This maintains the water quality and prevents blockages in the irrigation systems. In addition, the storage capacity of a silo is maximized, as the SiloFloat® cover reduces wave formation and evaporation. This anti-algae cover system is delivered as a complete solution and can be fitted on both empty and full silos.

Technical data

- Available up to Ø31 meter
- Material of floating cover: coated fabric, Genatex® PE 300
- Floating cover with additional buoyancy thanks to foam and PE buoyancy ring

Options

- Inflow hoses for water supply over the silo edge

- ✓ Prevents algae growth, wave formation, and evaporation
- ✓ Suitable for every type of water silo
- ✓ Can be installed quickly and easily without tools
